

CRS Systems

POS Kitchen/Remote/Slip Printers

Choose from a variety of heavy-duty industry standard RS-232C dot-matrix and/or thermal POS printers.

A single RS-232C printer may be used to print a report, receipt, and/or a requisition, or multiple printers may be stationed in different preparation areas. Each printer may be controlled to print only specific items. For example, two printers may be located so that your hot food kitchen printer receives only the hot food items and the front counter printer issues a customer receipt and a special expeditor requisition for order consolidation.

Flexible Printing Capabilities

- Two-color print available for guest checks and kitchen requisitions.
- Journal print mode for tracking sales.
- 40-columns wide for easy reading.
- Depot serviceable printers are easily interchanged. (No switches need to be set to identify a printer to the system.)
- For Receipts
- For Requisitions
- For Reports
- For Journal

Fast and Quiet Thermal Printers

Up to ten times the speed of impact printers, thermal printers are ideal for bar and precheck applications where speed and quiet operation are essential. Thermal printers don't require ink ribbons or expensive maintenance, and they are extremely quiet.

Multiple Printer Functions

For further savings, a single printer can perform multiple tasks. For example, at the bar the same printer that prints bar checks can also print bar requisitions, and/or print your end of day reports.

Requisitions/Journal/Receipts/Reports

Forty column printers provide clear, concise and detailed receipts, requisitions, journal and management reports that are easy to balance and easy to read.

Citizen iDP 3540/3541

Dot matrix printer with dual cash drawer drivers. Two color print available for guest checks or kitchen requisitions. iDP 3541 (shown) features an auto cutter. Alarm flashes/sounds when paper is low.

Columns:	40
Speed:	3.0 lines per second
